I'm an R Markdown document!

Section 1

Here's a **code chunk** that samples from a *normal distribution*:

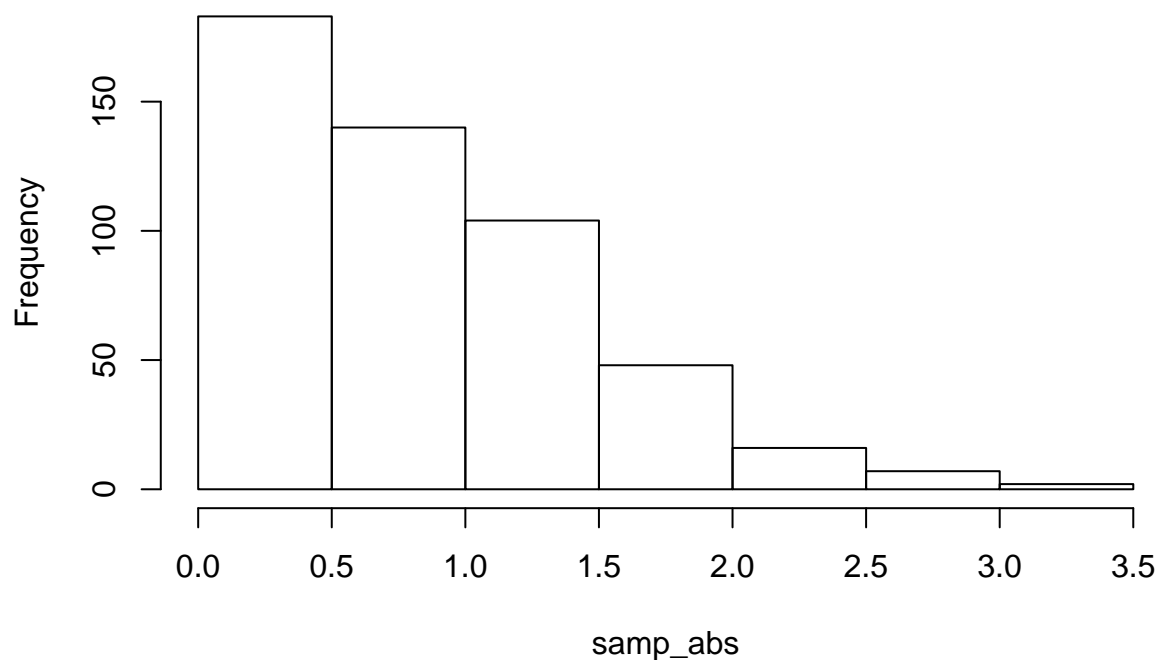

```
samp = rnorm(100)
length(samp)
```

```
## [1] 100
```

This code came from Angel!

```
samp = rnorm(500)
samp_abs <- abs(samp)
hist(samp_abs)
```

Histogram of samp_abs

- The **mean** of my altered sample is 0.71.
- The *median* of my altered sample is 0.83.
- The standard deviation of my altered sample is 0.63.

Section 2

I can take the mean of the sample, too! The length is 100.
